PROFILE

Project manager with six years of running parallel workstreams against deadlines that do not move, now working in software delivery. I have carried up to 12 complex client projects at once, coordinated 8 specialists against defined acceptance criteria, led teams of up to 20, and rewritten the process documentation two organizations still run on. The domains were legal services, events and construction; the job was the same one a delivery manager does — hold scope, keep the schedule honest, unblock people, and write it down so it survives without me.

I moved into IT deliberately: a U.S.-perspective project management course, a one-month C programming intensive at 42 Yerevan and 2nd place at HackNation. From day one I keep the board honest, chase dependencies before they become blockers, and write decisions down so they survive.

One interview is enough — give me 30 minutes and a real problem from your team, and you'll see how I work.

WHY ME FOR THIS ROLE

- **Parallel delivery is my normal state.** 12 complex projects at once, 200+ live court cases, 30+ hearings a week, several events running at the same time. Sprint load and a crowded backlog are a smaller problem than that was.
- **I write the process, not just follow it.** At M&M my templates, checklists and hand-offs became the team standard; at Shamayev I built an internal training program used by 50+ people. Onboarding docs and runbooks are work I actively enjoy.
- **Acceptance criteria are a habit, not a ceremony.** I reviewed eight specialists' output against written standards every week — the same loop as reviewing a ticket against its definition of done.
- **Stakeholders under stress.** Six years of telling clients bad news early and keeping them. A slipping release needs the same conversation.
- **Enough technical footing to be useful.** A one-month C programming intensive at 42 Yerevan and my COO role at SayWhen.am, a working AI voice-agent product — I can follow an engineering discussion and ask the question that unblocks it rather than the one that stalls it.
- **Three languages.** Armenian and Russian native, English C1 — team, client and documentation in whichever one the project runs in.
