Dear [Founder's name],

I am applying for the junior product role on your team. I will be straight about where I am: I am at the beginning of a product career, seven months into a deliberate move out of law. What I am not at the beginning of is the work underneath product — talking to users, finding the real problem behind the stated one, and writing it down clearly enough that other people can build from it.

For six years that was my job description in everything but name. As a paralegal and then Senior Case Manager in U.S. immigration law, my day started with an intake interview: someone anxious, describing a symptom rather than a problem, often withholding the detail that turned out to decide the case. My work was to ask the right questions, reconstruct what they actually needed, and turn it into a plan a team could execute — at M&M, up to twelve complex filings at once with eight paralegals reporting to me. When the process itself was the bottleneck I rewrote it, and that rewrite became how the team worked by default. That is discovery and spec writing with the labels removed.

Conversational AI is the specific reason I am writing rather than applying broadly. Since leaving law I have been building my own concept for B2B voice and text agents on top of RAG, built as separate verticals rather than one generic assistant — which has taught me more about where these products fail than any course would: retrieval that returns the plausible answer instead of the right one, the handover to a human, and the gap between what users actually type and what the happy path assumed. A chat-centric product is where I already wanted to be working.

I also noticed the shape of your founder's background — commercial strategy alongside behavioural economics, sociology and philosophy. My own training is law: six years of reading how rules meet actual human behaviour, and of arguing a position in writing where a weak inference gets caught. I expect that to be a productive overlap rather than a polite coincidence.

Practically: I am in Yerevan, UTC+4, so my afternoon covers a CET/CEST morning comfortably — a real overlap, not a fringe one. I am looking for exactly this kind of role: close to a founder, early enough to see the decisions get made, in a team that moves fast enough that I have to keep up. This summer I completed “Project Management with a U.S. Perspective: Skills for Global Success”, a month-long in-person course run by the Yerevan American Corner together with the U.S. Embassy (21 July – 21 August 2026) — useful here because it drilled the Western delivery vocabulary your engineers will expect me to already speak. Second place at HackNation and a month of C at 42 Yerevan's Piscine, both done while still employed full time, are the honest evidence that I do not need to be pushed.

I would be glad to walk you through how I would run discovery on one of your current product questions. Thank you for your time.

Sincerely,

Ishkhan Khchoian
