Dear BostonGene Hiring Team,

I am writing to apply for the Intern Business Analyst position in Yerevan.

For six years my job was, in practice, close to the one described in your posting - only in a different industry. As a paralegal and then Senior Case Manager in U.S. immigration law, I worked inside a regulated, document-heavy system where every case had a defined process, a fixed external deadline, and no tolerance for a missing field. I gathered requirements from users and clients in intake interviews, wrote the workflows, templates and checklists my team ran on, and was the first point of contact whenever eight specialists hit a process or system problem. Before submission I checked their work against defined acceptance criteria - which is where I learned that being detail-oriented is a habit you build, not a trait you claim.

That is why the laboratory side of this role does not worry me. I have not worked in biomedicine, and I am not going to pretend otherwise. But I have spent years supporting expert users who care deeply about their own domain and not at all about software, and turning what they actually need into something structured enough to act on. I work daily in Jira, Confluence and Notion, and I use GenAI tools as a normal part of my analysis and documentation work.

I should also be straightforward about level. My degree is in law, and I am applying for an internship deliberately: I would rather learn business analysis properly, inside a real system, than overstate what I already know. What I offer in exchange is six years of professional discipline in deadline-driven work, English at C1 and Russian at C2, and a career change I have already committed to - I left a stable legal career in February 2026, completed a month of C programming at 42 Yerevan alongside a full-time job, and took second place in the HackNation local pitches.

A team of bioinformaticians, biologists, physicians and engineers building systems that real laboratory users depend on is exactly the environment I want to learn in. I would welcome the chance to talk about how I could support your Business Analysts day to day.

Thank you for your time and consideration.

Sincerely,

Ishkhan Khchoian
