PROFILE

Analyst by training and by six years of practice, now moving into IT business analysis. My profession was reading dense material, finding the fact that decides the outcome, and defending the conclusion in writing that a hostile reader would test — first as a judge's associate drafting judicial acts across 200+ parallel cases, then analysing civil contracts and claims, then owning complex client matters end to end.

The other half of a BA's job is process. At M&M I mapped how work actually flowed, found where it broke, and rewrote the templates, checklists and hand-offs; the rewrite became the team standard. At Shamayev I built an internal training programme whose materials served 50+ people. Requirements, documentation and stakeholders are the core of this job, and they have been the core of mine for six years.

WHY ME FOR THIS ROLE

- **Requirements elicitation.** Several hundred structured intake interviews with people who describe symptoms rather than needs. Eliciting what someone actually requires, as opposed to what they asked for, is the oldest skill I have.
- **Documentation that holds up.** Judicial acts, contracts, claims, SOPs, training curricula. Written precision is not a soft skill in law — an ambiguous sentence loses the case.
- **Process mapping and improvement.** I have twice replaced a broken workflow with one the team then adopted by default, and I document the as-is honestly before proposing the to-be.
- **Analytical volume.** 200+ parallel cases and 30+ hearings a week, three roles at once. Large, messy inputs with a deadline attached are familiar territory.
- **Stakeholder management.** Clients under stress, eight specialists, court deadlines, contractors and vendors — I am comfortable chasing an answer from someone who does not report to me.
- **Technical footing.** A month of C at 42 Yerevan, U.S.-standards PM training, and my own AI/RAG product concept — enough to write a requirement an engineer can act on.
